

# KRRM-144 - KRAD Equivalency with KNS Technical Requirements

## Gap Analysis

List of KNS features and status if they are implemented in KRAD

- Gap Analysis - Data Dictionary
- Gap Analysis - Inquiry
- Gap Analysis - Lookup
- Gap Analysis - Maintenance Document
- Gap Analysis - Transactional Document
- Gap Analysis - Components

## Focus Group Topics

The focus groups will made of stake holders from across the Kuali projects to address questions regarding the equivalency.

### Lookup:

**FYI:**

- L41: The return values of QuickFinder lookups will be in the "Actions" Column. Used to be the "Return Value" column. [KULRICE-8815](#)

**Questions:**

- L23: Do we need to support `triggerOnChange` on lookup criteria fields? **No**
- L33, L38/L101, L39: Do implementors really need to configure the lookup result limits, the page size for results, and the maximum result column display length? **Yes**
- L84: Is backwards compatibility for lookups with criteria values via URL needed? [KULRICE-9082](#) **No**
- L72: Do we really need a convenience property for menubar? Doing so will make other configuration difficult. For detailed discussion see [KULRICE-6388](#) **No**
- `Lookupable.shouldDisplayHeaderNonMaintActions` and `shouldDisplayLookupCriteria` in KNS are not being used. We are not sure about their need and function. Are the projects using them?
- For the message that gives the number of results retrieved, an info message is displayed on top. Is this OK? (Current design is using the style as other informational messages). **Not ok, hide.**

### Inquiry:

**Questions:**

- Can the `downloadCustomBOAttachment` be removed? Even in KNS it was not fully implemented and would have required significant changes to support this. (Discussion details in [KULRICE-10261](#)) [KULRICE-10571](#)
