

# KRAD Screen Conversion Process

Due to the ongoing work on the new L&F and the coming integration of Bootstrap, we will be doing some screen conversion work before we have that groundwork in place, so I'm proposing a two phase process for screen conversions:

## Phase 1:

- build/convert backing code (actions -> controllers, forms, helpers, etc.)
- rough cut screen conversion
  - full functionality, but minimal aesthetic work

## Phase 2:

- demo / UX feedback:
  - look at original screen
  - look at rough cut of new screen
- refine the screen
- develop use case descriptions for QA:
  - brief, plain english descriptions without enumerating every click
- UX handshake
- QA handshake
