

Forms

Pattern: Forms

When to use this pattern

- When a user needs to fill out a series of fields or other selection mechanisms to submit data.

Example

The example shows two form elements. The first is a multi-select dropdown menu, indicated by a red vertical bar and a blue circle with the number '1'. The second is a text input field, indicated by a blue vertical bar and a blue circle with the number '2'.

How It Looks

1	Multi-select drop-down: CSS class <code>ui-multiselect</code>
2	Form field: CSS class <code>form-control</code>

How It Works

- Form fields allow users to enter data for submission.
- The type of data requested should dictate the type of form field (text entry, drop-down, date picker, etc.)
- Form fields should contain visual cues for the user as to what type of input is expected.
