

Global Navigation Menu

Pattern: Global Navigation Menus

When to use this pattern

- When navigation controls should be present on every screen of an application.

Examples

How It Looks

1	Default menu state: CSS class dropdo wn
2	Hover menu state: CSS class dropdo wn open
3	Open menu: CSS class dropdown-tog gle

How It Works

- Global Navigation should be present regardless of what page the user is viewing.
- Navigation items can change depending on use role, activity in the application, or logged

in/logged out status.
