

Component Specifications

Purpose

The UXI team has created a process for adding and modifying components in the Kualu Design Guide. The process ensures that components are reviewed across all Kualu projects and a component added to the Kualu Design Guide will work for the portfolio of Kualu products.

Documenting the component using the component specifications template will give the UXI team, UX Designers, Developers, and the review committee all of the information they need in order to move the component through the process for creating a new component or modifying an existing component. The component specifications will be the basis for the documentation in the Kualu Design Guide.
